Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Veröffentlichungen wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well-established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well-defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in videotext databases.

To help the user focus his research, Eurostat has created 'themes', i.e. subject classifications. The statistical documents and publications are listed by series: e.g. yearbooks, short-term trends or methodology in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission européenne a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type vidéotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

I

INTRODUCTION

I. INTRODUCTION

1. PRESENTATION

This is the second issue of Eurostat's yearly publication "Geographical breakdown of the current account" to present data according to the fifth edition of the *IMF Balance of Payments Manual*¹ (*BPM5*). In addition this publication contains aggregated data for the European Union (EU) of fifteen Member States (EUR15). Nonetheless data for the European Union of twelve Member States (EUR12) continues to be provided.

The main purpose of this publication is to provide detailed statistical information on the geographical breakdown of the current account of the European Union (EUR15 and EUR12), each of its Member States, the USA and Japan. It is the only existing publication to present harmonised and comparable current account statistics with a geographical breakdown of flows that covers an interesting diversity of partner zones (up to 49)². Trade negotiations such as those in the context of the General Agreement on Trade in Services (GATS) or the many relations between the European Union and its partners give a high priority to this type of statistical information.

Besides presenting geographically broken-down results for the current account as a total, this publication includes with the same level of geographical detail results for: *merchandise, services* (itemising *transportation* broken down in *sea, air* and *other transportation, travel, communications services, construction services, insurance services, financial services, computer and information services, royalties and licence fees, other business services, personal, cultural and recreational services* and *government services*), *income* (separating *compensation of employees* and *investment income*) and *current transfers*.

The period covered is from 1992 to 1995 for it corresponds to the most complete, recent, better harmonised and more detailed information available. Although harmonised data are available for the decade 1986 to 1995, the corresponding tables could not be included in the present printed publication given the large volume that they would take.

Besides, historical data is included in a previous Eurostat publication "Geographical breakdown of the current account, EUR12 - 1984 to 1993"

All flows are expressed in *ecus* using official yearly average exchange rates of all Member States' national currencies, of the US Dollar (*USD*) and of the Japanese Yen (*JPY*) (provided in *annex 1* of this publication). The quarterly Eurostat balance of payments publication also provides yearly totals that may differ from those published here, which reflects revisions carried out on annual data and different exchange rates from national currencies to *ecus* (quarterly average rate and yearly average rate³).

Main changes due to the adoption of the *BPM5* have been incorporated. In particular, the detail on services covers a wide range of standard components of the *BPM5*. The geographical breakdown covers up to 49 partner zones (in relation to the 1996 edition, Mexico and MERCOSUR were added). The set of *BOP* items codes published and the geonomenclature (codes and labels of published zones) are given in *annex 3* at the end of this publication.

Given that the results obtained are based on the balance of payments of EU Member States, the presentation adopted is in fact a compromise, for it had to take into account not only the different degrees of implementation of the *BPM5* by Member States but also the need to link the methodology of *BPM5* with the methodology of *BPM4* since Member States sent the data in either of the two formats.

Therefore, historical data and recent data supplied by Member States still using *BPM4* have been converted by Eurostat to comply with *BPM5* methodology and with the presentation adopted. *Annex 4* at the end of this publication provides a correspondence table between the presently published classification (*BPM5*) and the previously published classification (*BPM4*).

Details on the harmonisation process that Eurostat had to carry out to cope with certain insufficiencies in Member States data are provided in *Chapter II, section 4. Production issues*.

¹ Balance of Payments Manual, fifth edition, International Monetary Fund, Washington, D.C. 1993.

² Another Eurostat publication (International trade in services-EU, 1986-1995) also drawn up according to the new *BPM5*, presents a detailed classification of services extended to approximately 35 items with a geographical breakdown reduced to 6 partner zones.

³ Money and finance-quarterly, Eurostat

2. NEW IMF MANUAL: MAIN CHANGES BETWEEN BPM4 AND BPM5

This section describes the major changes which have occurred in the methodology and presentation of the balance of payments since the fourth edition of the Balance of Payments Manual (*BPM4*), published in 1977.

CURRENT ACCOUNT

Goods

The coverage of *goods* in the *BPM5* has been expanded. The balance of *goods* now includes certain transactions which used to be included in the services account. They include: *goods for processing* which cover exports/imports of goods for processing and their subsequent reimport/reexport; *repairs on goods*; and *goods procured in ports by carriers*.

Services

Since services have become increasingly important in international transactions, a greater detail in the breakdown of services is now required. Therefore,

the classification of services has been considerably extended since the *BPM4*. *Chapter II, section 3. Classification* of this publication lists the services included in the presently published breakdown.

Income

Investment income and all forms of *compensation of employees* have now been joined to form a separate category entitled *income* in the current account.

Current account and capital transfers

In the *BPM5* Manual the *current account* only contains *current transfers*; the *capital transfers* are included in the *capital and financial account*. Thus *unrequited transfers* (comprising both current and capital transfers) no longer exist in the new version of the Balance of Payments manual. This distinction is made in order to harmonise the balance of payments with the 1993 System of National Accounts (*SNA*).

II

METHODOLOGICAL ASPECTS

II. METHODOLOGICAL ASPECTS

1. DIFFICULTIES OF ASSESSING THE INTERNATIONAL MARKET IN SERVICES

1.1. Recording and valuation

Considering its intangible nature, international trade in services is much more difficult to record than trade in merchandise. The information is collected by means of complex systems combining enterprises' direct declarations, surveys, the census of bank transactions and estimates. Each European Union Member State has set up specific collection systems.

The recording of services raises three types of problems:

Conceptual problems: the definition itself of certain services is difficult to establish. This is particularly true in the case of *insurance*. Although the *BPM5*, recommends insurance services to be estimated by the service charges included in total premiums earned, production of estimates for such charges are not yet completely achieved by all Member States. Up to now, and in the absence of better information, by convention, insurance services have been measured, for some Member States, as the difference between premiums received and claims paid.

Another difficult item is *construction services* due to the complexity in establishing the borderline with *direct investment*. By convention if construction flows are not supplied or are considered to be underestimated, Eurostat decreases direct investment flows by the estimated amounts of construction services which are reallocated to construction services.

Problems of mixed transactions: the value of certain services is not specified separately but is aggregated with the value of other transactions on the same invoice.

This applies particularly to all services connected with trade in merchandise (*transportation, transportation insurance, international merchanting, related technical services*). In the case of *transportation* and *transportation insurance*, estimates are made on the basis of freight and insurance rates that are used to correct the merchandise flows recorded.

This problem also applies to *financial services*, some of which, in the form of commissions, can be reported separately. Others which cannot be identified as such, are included with interest payments in the *current account* heading *investment income* or in the *financial account* together with assets traded.

Problems of identifying gross flows: many services can be paid for by means of an international offsetting mechanism (*post and telecommunications, rail transport*)¹. Furthermore, certain transactions between related companies are also settled by an offsetting mechanism. In both cases, the payments identified correspond to the net result of a number of transactions that are difficult to pinpoint. Depending on the collection systems, additional information may be requested from companies in order to obtain details of the gross flows.

All these problems could involve underestimation of the flows of services in the balance of payments.

1.2. Problems linked to the analysis of values

The only statistics available are expressed in value terms. The trends observed in the flows and balances of services depend on the volume of transactions, market prices, exchange rates and any corrections carried out. Variations in prices and exchange rates are often considerable, making it difficult to analyse value flows.

Time series analysis or comparisons across countries should thus take into account such variables as the ones mentioned for they have an effect on the trends of the statistics published.

Exchange rates: The fluctuations of the US dollar against the *ecu* have a particularly important impact on the European Union balance of payments. The US dollar, as a transaction and price-formation currency, is still very important. The prices of certain types of services are fixed in US dollars, irrespective of the place of residence of the contracting parties.

Prices: Over the last ten years there have been substantial fluctuations in relative prices, making it difficult to compare trends between types of services.

Consequently, the growth in the volume of trade in certain services linked to very rapidly changing technologies (communications, computer science) does not appear clearly in the results expressed in value terms. This is due to a large reduction in prices.

Transportation services and data processing services constitute inputs for enterprises and any changes in their price have an effect on the value of the final output.

¹ For example instead of paying the full debt outstanding between each party (gross flows), a party only pays the difference between what they owe and what is owed to them (net flows).

1.3. Problems of consistency, asymmetries

Although in theory, all balance of payments accounts are drawn up in accordance with an internationally accepted methodology, the balance of payments of all the countries in the World are not fully compatible or comparable. The reasons for this lack of comparability are many. Some examples are the following:

- All countries do not have the same resources for recording and analysing the information and because of the special features of data collection they are sometimes obliged to depart from the recommended standards (in the case of insurance, for example).
- All countries do not agree upon the treatment of certain long term activities (construction services, for example)
- The increasing speed of world-wide economic integration and proliferation of transactions between related companies makes it difficult to allocate flows between services and direct investment.
- An international detailed nomenclature for trade in services does not exist and therefore the same designations of services do not always cover the same activities.

The statistical problems mentioned above generate statistical discrepancies between countries' current account balances. These discrepancies are called asymmetries. More specifically:

Bilateral Asymmetry. The balance declared by one compiling economy in relation to another does not correspond to the balance declared by its partner. The sum of these balances, called bilateral asymmetry should in theory be nil.

However, misallocation of transactions creates an asymmetry at detailed item level that can be offset at an aggregated level. In the same way, bad geographical breakdown creates a bilateral asymmetry which may be offset at an aggregated level of geographical breakdown.

Asymmetry in terms of geographical aggregation: the World total of current account credits does not tally with the World total of debits, whereas in theory they should be equal. The difference between current account credits and debits is termed *world-wide asymmetry* (or discordance) of *current account payments*.

2. CONCEPTUAL FRAMEWORK OF THE BALANCE OF PAYMENTS

The balance of payments records all economic transactions undertaken between the residents and non-residents of a country during a given period.

A **transaction** is defined in the *BPM5* as being an economic flow that reflects the creation, transformation, exchange, transfer, or extinction of economic value and involves changes in ownership of goods and/or financial assets, the provision of services, or the provision of labour and capital.

The **concept of resident** in the *BPM5* is identical to that used in the 1993 System of National Accounts (*SNA*). The concept is not based on nationality or legal criteria. It is based on the notion of centre of economic interest. An institutional unit is a resident unit when it has a centre of economic interest in the economic territory of a country for a period of at least one year.

According to the *BPM5*, the **economic territory** of a country consists of the geographic territory administered by a government, including territorial enclaves in the rest of the World¹ (e.g. embassies). In particular the economic territory of an international organisation consists of a territorial enclave over which the organisation has jurisdiction (e.g. the European Union Institutions in the host Member States);

The balance of payments accounts are constructed on the *double-entry accounting system*, so that every transaction is - in principle - recorded in two accounts, once as a debit, once as a credit. If for example, a country exports goods and receives foreign currency in return, it will record the export by a credit in the *current account* (more specifically in the *goods account*) and the increase in the asset (foreign currency) by a debit in the *capital and financial account*.

Thus, given complete and accurate recording, as a financial statement the overall balance of payments (i.e. the combined current account and capital and financial account) should sum to zero. In practice, however, a balancing item is used to compensate for measurement *errors and omissions* which occur during the recording of the international transactions in the accounts.

This being so, how is it that one can talk about balance of payments *surpluses and deficits*?

When the balance of payments is said to be in or out of balance, this does not refer to the balance of payments as a whole but simply to one of the sub-balances, that is, one item or a set of items. For

¹ To harmonise data collection, Eurostat asks EU Member States to use, within the EU zone, a "BOP territory" classification involving small territories. This classification is given in *annex 5*.

instance, the goods account will be in deficit/surplus when the total value of imported goods is greater/smaller than the total value of exported goods.

3. CLASSIFICATION

The classification used in this publication is based on the standard components defined in the *BPM5* and on the more disaggregated joint Eurostat-OECD trade in services classification whose underlying conceptual framework is identical to that of the *BPM5*.

As was already mentioned when introducing the presently adopted presentation, because of the transition from the *BPM4* to the *BPM5*, the classification published is in fact a compromise. It is the maximum common classification possible that could be established on the basis of the results made available by Member States corresponding to the new joint Eurostat-OECD *BOP* questionnaires for the period 1992 to 1995 (some countries used *BPM5* but others still used *BPM4*). Eurostat took into account the existing historical data (1986 to 1991) which was organised according to the previously published classification (*BPM4* compatible). Therefore and with the purpose of using a maximum of the historical information a correspondence between the old and the new formats, as meaningful and coherent as possible had to be devised. This operation determined as well the classification finally adopted in the present report (*annex 3*).

This publication contains certain particularities which are not in line with the recommendations contained in the *BPM5*. For a better understanding of these particularities the items are first defined based on the classification recommended as an international standard in the *BPM5* and in the joint Eurostat-OECD trade in services classification (see definitions given below) and deviations from this standard are then described in the following section (*II.3.2. Particularities of this publication*).

3.1. Definitions of the items

The following definitions are based on the *BPM5* and on the joint Eurostat-OECD trade in services classification.

The *BPM5* divides the balance of payments into two broad sub-balances: the *current account* and the *financial and capital account*.

In this publication Eurostat will only consider the current account and provide the definitions of the items selected to be published¹.

3.1.1. Current account

The current account is subdivided into four basic components: *goods*, *services*, *income*, and *current transfers*.

3.1.1.1. Goods

This is generally the biggest category of the current account. Goods cover *general merchandise*, *non monetary gold* and since the implementation of the *BPM5*, *goods for processing*, *repairs on goods* and *goods procured in ports by carriers*. The most important component, *general merchandise*, includes all movable goods whose ownership is transferred from a resident to a non-resident and vice versa.

When calculating the balance of payments both exports and imports should be valued free on board (*f.o.b*). When a cost, insurance, freight (*c.i.f*) valuation is provided (as is the case of imports in foreign trade statistics), the freight and insurance components have to be estimated separately and eliminated from the trade figures to arrive at a *f.o.b* valuation. These components are then recorded in the services account.

This is one of the reasons why *foreign trade* statistics and *balance of payments* figures for *goods* are not the same.

3.1.1.2. Services

3.1.1.2.1. Transportation

The definition of this item is identical to the definition of *transportation* in the *BPM5*, paragraphs 230 to 240. The general definition is presented in paragraph 230:

"*Transportation* covers all transportation (*sea*, *air*, and *other* - including land, internal waterway, space, and pipeline) services that are performed by residents of one economy for those of another and that involve the carriage of passengers, the movement of goods (freight), rentals (charters) of carriers with crew, and related supporting and auxiliary services. Some related activities are excluded: freight insurance, which is included in *insurance services*; goods procured in ports by non-resident carriers and repairs of transportation equipment, which are included in *goods*; repairs of railway facilities, harbours, and airfield facilities, which are included in *construction services*; and rentals (charters) of carriers without crew, which are included in other business services."

¹ More details is given in the publication *International trade in services-EU, 1986-1995*, Eurostat 1997

The breakdown of transportation represents a cross-classification by:

- a) mode of transportation: *sea, air and other transport* (space, rail, road, internal waterway and pipeline transport).
- b) kind of services: transport of *passengers*, transport of *freight* and *other (supporting, auxiliary and other) services*.

This publication presents information limited to the classification by mode of transportation. More detailed statistics corresponding to the cross classification are presented in the publication *International trade in services, EU 1985-1994*; Eurostat, 1996.

3.1.1.2.2. Travel

The definition of this item is identical to the definition of *travel* in the *BPM5*, paragraphs 241 to 251.

The general definition is presented in paragraphs 242, 243 and 244:

"*Travel* covers primarily the goods and services acquired from an economy by travellers during visits of less than one year in that economy. The goods and services are purchased by, or on behalf of, the traveller or provided, without a quid pro quo, for the traveller to use or give away. Excluded is the international carriage of travellers, which is covered in passenger services under *transportation*.

A traveller is an individual staying, for less than one year, in an economy of which he is not a resident for any purpose other than (i) being stationed on a military base or being an employee (including diplomats and other embassy personnel) of an agency of his or her government, or (ii) being an accompanying dependent of an individual mentioned under (i). Expenditures made by individuals covered in (i) and (ii) are recorded under *government services, n.i.e.*. Expenditures made by individuals undertaking a productive activity directly for an entity that is a resident of that economy (including seasonal and border workers) are included under *travel*. The one-year rule does not apply to students and medical patients, who remain residents of their economies of origin even if the length of stay in another economy is one year or more."

3.1.1.2.3. Communications services

According to the *BPM5* (paragraph 253), this item comprises:

- *Telecommunications* (encompassing the transmission of sound, images, or other information by telephone, telex, telegram, cable, broadcasting, satellite, electronic mail, facsimile services etc. and include business network services, teleconferencing, and support services);

- *Postal and courier services* (encompassing the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels, and packages, including post office counter and mailbox rental services).

3.1.1.2.4. Construction services

The definition of this item is identical to the definition of *construction services* in the *BPM5*, paragraph 254:

"*Construction services* cover work performed on construction projects and installations by employees of an enterprise in locations outside the economic territory of the enterprise. (The work is generally performed for a short time period; the one-year rule is to be applied flexibly). Goods imported by the enterprise for use in the projects are included in the value of these services rather than under goods; expenditures for local supplies, etc. are included under *other business services*".

Excluded are projects carried out by foreign subsidiaries or branches of enterprises (direct investors) and site offices for which the construction companies "maintain a complete and separate set of accounts of local activities (i.e. income statement, balance sheet, transactions with the parent enterprise), pay income taxes to the host country, have a substantial physical presence, receive funds for enterprise work for the enterprise account, etc." (paragraph 78 of the *BPM5*).

Construction services cover, on a gross basis, all goods and services that form an integral part of construction contracts; they relate to:

- a) site preparation work;
- b) construction work for buildings and completion;
- c) construction work for civil engineering;
- d) installation of machinery and assembly work;
- e) other construction: renting services of construction or demolition equipment with operator, exterior cleaning work of buildings, etc.

3.1.1.2.5. Insurance services

The definition of this item is identical to the definition of *insurance services* in the *BPM5*, paragraphs 255-257. It encompasses "the provision of various types of insurance to non-residents by resident insurance companies, and vice versa". It includes agent commissions related to insurance.

Insurance services are estimated or valued by service charges included in total premiums earned rather than by total premiums. Gross premiums and gross claims are recorded as memorandum items.

The various types of insurance concerned by this definition are:

- a) Life insurance and pension funding
- b) Freight insurance
- c) Other direct insurance
- d) Reinsurance
- e) Auxiliary services

3.1.1.2.6. Financial services

The definition of this item is identical to the definition of *financial services* in the *BPM5*, paragraph 258. It covers "financial intermediary and auxiliary services (except those of insurance enterprises and pension funds) conducted between residents and non-residents. Included are intermediary service fees, such as those associated with letters of credit, bankers' acceptances, lines of credit, financial leasing, and foreign exchange transactions. (For the latter, the spread between the midpoint rate and the buying/selling rate is the service charge). Also included are commissions and other fees related to transactions in securities - brokerage, placements of issues, underwriting, redemption, and arrangements of swaps, options, and other hedging instruments; commissions of commodity futures traders, and services related to asset management, financial market operational and regulatory services, security custody services, etc. Service charges on purchases of International Monetary Fund resources are included among an economy's financial service payments, as are charges (similar to commitment fees) associated with undrawn balances under stand-by or extended arrangements with the IMF".

Excluded are financial intermediation services indirectly measured that may be imputed or derived from the differences between reference interest rates and rates actually applied to loans, debt securities or deposits.

3.1.1.2.7. Computer and information services

The definition of this item is identical to the definition of *computer and information services* in the *BPM5* paragraph 259. It covers "computer data and news-related service transactions between residents and non-residents. Included are: data bases, such as development, storage, and on-line time series; data processing - including tabulation, provision of processing services on a time-share or specific (hourly) basis, and management of facilities of others on a continuing basis; hardware consultancy, software implementation - including design, development, and programming of customised systems; maintenance and repair of computers and peripheral equipment;

news agency services - including provision of news, photographs, and feature articles to the media; and direct, non-bulk subscriptions to newspapers and periodicals".

3.1.1.2.8. Royalties and licence fees

The definition of this item is identical to the definition of *royalties and licence fees* of the *BPM5*, paragraph 260. It covers "the exchange of payments and receipts between residents and non-residents for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights, trademarks, industrial processes, franchises, etc.) and with the use, through licensing agreements, or produced originals or prototypes (such as manuscripts and films)".

3.1.1.2.9. Other business services

The coverage of this item is identical to the coverage of *Other business services* in the *BPM5* (paragraphs 261 to 264), except that the residual sub-item *services between affiliated enterprises, not included elsewhere* may include additional categories of transactions. It includes highly varied sectors such as: *merchandising and other trade-related services; operational leasing services; miscellaneous business, professional and technical services*.

In this publication, only statistical information concerning the global item *Other business services* is given.

3.1.1.2.10. Personal, cultural and recreational services

According to *BPM5* (paragraph 265), this item comprises:

- *Audio-visual and related services* (comprising services and associated fees related to the production of motion pictures (on film or video tape), radio and television programs (live or on tape), and musical recordings. Included are receipts or payments for rentals; fees received by resident actors, directors, producers, etc. (or by non-residents in the compiling economy) for productions abroad; and fees for distribution rights sold to the media for a limited number of showings in specified areas. Fees to actors, producers, etc. involved with theatrical and musical productions, sporting events, circuses, etc. and fees for distribution rights (for television, radio, etc.) for these activities are included. Excluded are purchases (sales) of films, programs, recorded music, musical compositions and books);

- *Other personal, cultural and recreational services* (comprising other personal, cultural and recreational services such as those associated with museums, libraries, archives, and other cultural, sporting, and recreational activities. Also included are fees for

services, including provision of correspondence courses, rendered abroad by teachers or doctors. Excluded are all expenditure by travellers on education and health).

3.1.1.2.11. Government services, not included elsewhere

In line with the *BPM5* (paragraph 266), this item represents "a residual category covering government service transactions (including those of international organisations) not contained in previous classifications.

Included are all transactions by embassies, consulates, military units, and defence agencies with residents of economies in which the embassies, etc. are located and all transactions with other economies. (Excluded are transactions with residents of the home countries represented by the embassies, consulates, etc.). Transactions in this category comprise those for goods and services (such as office supplies, furnishings, utilities, official vehicles and operation and maintenance, and official entertainment) and personal expenditures incurred by diplomats and consular staff and their dependents in the economies in which they are located. Also included in this category are transactions, subject to the same considerations as those in the preceding item, by other official entities (such as aid missions and government tourist, information, and promotion offices) located in economies abroad. Included, as well, are transactions that are associated with general administrative expenditures, etc. and not classified elsewhere. In addition, transactions associated with aid services that are provided by non-military agencies, do not give rise to any payments, and have offsets in transfers are included in this category. Last, transactions associated with the provision of joint military arrangements and peacekeeping forces, such as those of the United Nations, are included in government services, n.i.e. "

3.1.1.3. Income

This contains two main items: *compensation of employees* and *investment income*.

3.1.1.3.1. Compensation of employees

Compensation of employees records wages, salaries and other benefits, in cash or in kind, earned by individuals for work performed for economic units whose place of residence is different from their own (border workers, seasonal workers, employees of international organisations, etc.).

3.1.1.3.2. Investment Income

Investment income covers income which a resident entity derives from the ownership of external financial assets (credit) and income non-residents derive from their financial assets invested in the compiling economy (debit). This includes interest and dividends on direct, portfolio and other investment.

3.1.1.4. Current Transfers

Transfers cover international transactions in which goods, services, or financial items are transferred between the residents of one economy and the residents of foreign economies without something of economic value being received in return. *Current transfers* are broken down into two subcomponents: *general government* and *other sectors*.

• General government current transfers

Current transfers are recorded as general government transfers if the resident government is the receiver or sender. More specifically these transfers cover offsets to transactions between resident governments and international organisations (e.g., contributions to the budget of the European Union institutions), between resident governments and governments of foreign economies (cash transfers and gifts to/from other governments) and between resident governments and private non-residents (taxes, pension payments, etc.)

• Other sectors current transfers

The *other sectors' current transfers* cover transfers where resident individuals and resident non-governmental institutions are the senders or receivers. These include for example workers' remittances, residents' contributions to foreign social security schemes, etc.

3.2. Particularities of this publication

This is the first Eurostat *Geographical breakdown of the current account* publication to publish Member States' data in accordance with the new *Balance of Payments Manual (fifth edition)*, IMF 1993. However, since some Member States still have to adapt to the new requirements (*BPM5* methodology and increased geographical breakdown detail), and in order to be able to produce a European Union total, this publication shows certain particularities which slightly deviate from the *BPM5*.

3.2.1. Breakdown of services

The classification published covers a wide range of the standard components for services of *BPM5* taking into account that flows are geographically broken down. Exceptions are:

The sub-items classified by mode of transportation: *passengers* (207 - sea, 211 - air, 215 - other transportation);

- *freight* (208 - sea, 212 - air, 216 - other transportation);

- *other* (209 - sea, 213 - air, 217 - other transportation).

The sub-items of *travel* (236): *business* (237) and *personal* (240).

The sub-items of *other business services* (268):

- *merchandising and other trade related services* (269);

- *operational leasing services* (272);

- *miscellaneous business, professional and technical services* (273).

The sub-items of *personal, cultural and recreational services* (287):

- *audio-visual and related services* (288);

- *other personal, cultural and recreational services* (289).

The main reason for not including these components is that several countries are not yet able to provide geographically broken down data for these items.

For practical reasons Eurostat has introduced two new items: the item *other services* (981) that groups all the services which are not *travel* or *transportation* and the item *services not allocated* (982) that groups all the services that Member States have not been able to allocate under *travel*, *transportation* or elsewhere.

In fact, the item *other services* (981) was needed to establish the link between the two periods, 1985 to 1991 under the methodological framework of *BPM4* and 1992 to 1994 under the new methodological framework of *BPM5* (even for this more recent period some countries provided data according to *BPM4*). The item *services not allocated* (982) was created, because for some Member States the sum of the amounts supplied for all sub-items of services did not add up to the given total for the aggregated item *services* (200).

3.2.2. Current and Capital account

Distinction between current and capital transfers

Since many countries have not yet been able to apply this distinction, they could not provide a current account, as defined in *BPM5*, excluding capital transfers. As a provisional option, Eurostat has created a so-called *current and capital account*.

Likewise Eurostat has provisionally included under the tables' heading *current transfers*, the *BPM4 unrequited transfers* for the period 1992 to 1994 for Japan, for the period 1992 to 1995 for the USA and for those Member States that did not make the distinction between current and capital transfers. This will be indicated for each country in a separate booklet "Deviation from the defined methodology for each reporting economy" - Annex to the publications "International trade in services - EU, 1986 - 1995" and "Geographical breakdown of the current account - EU, 1992 - 1995".

Thus the classification published presents, in addition to the *current account* heading defined as in *BPM5*, the heading *current + capital account*. This heading includes the two types of transfers together and corresponds to the *current account* as defined in *BPM4*.

For the period 1992 to 1994, European Union (EUR12 and EUR15) totals have been estimated for the two separate accounts. The estimated European Union current account (*BPM5*) total is published, but estimates for individual Member States that have not supplied the corresponding data are not published, unless otherwise has been indicated.

More detailed data will be published in future editions of this publication as they become available from reporting Member States.

Apart from the above mentioned exceptions. The overall structure of the tables in *chapter III* generally corresponds to the *BPM5*.

4. PRODUCTION ISSUES

4.1. Production process

Each year, the national banks or the national statistical offices provide Eurostat with data according to a set of questionnaires approved by all Member States and designed to fulfil *BPM5* requirements. These questionnaires are included in an internal document called the *Balance of Payments Vade mecum*. This document contains apart from the questionnaires, coding system, format and media details, deadlines and instructions on how data should be supplied.

Due to the transition period that all *BOP* compilers are going through and given the necessity to adjust current systems to the new *BPM5*, some countries are still not able to comply fully with the agreed Eurostat requirements. Thus, Eurostat has to apply several adjustments to the original data supplied by the Member States in order to harmonise and fill up missing information to produce a meaningful EU aggregate. The choice of items and partner zones to be published have been decided according to the information available in the majority of Member States or in the Member States which have highest specific weight in the whole of the EU Balance of Payments.

The main steps between the reception of data and publication are the following:

◆ Step 1: Data receiving process

Eurostat usually receives data under two types of format: BOPSTA (EDIFACT¹ message) and spreadsheets or text files. For this publication most countries have used the Bopsta format via E-mail for the first time, which created some starting up problems.

With the data, some Member States provided a letter explaining data particularities. This is very useful for the harmonisation process since all the special characteristics of each country can be taken into account. At the same time Eurostat compiles all the available information from other institutions' publications and from Eurostat's Quarterly and Foreign Direct Investment publications.

◆ Step 2: Checking process of the input data

Several sorts of consistency data checks are carried out by Eurostat:

- Internal checks: data are checked at aggregated level concerning geographical zones and items;
- External checks: data are compared with national publications and with quarterly data received by Eurostat; consistency with *BPM5* is also checked to facilitate the eventual harmonisation.

On the basis of the checking report generated by Eurostat, problems found vis-à-vis the Member States and proposed solutions are discussed with each Member State.

Sometimes the Member States prefer to make a new sending corresponding to all or part of the data or provide complementary information to solve the problems.

According to the assented bilateral agreement Eurostat can face the next step.

◆ Step 3: Harmonisation, correction and estimation process

For each Member State original data are adjusted to obtain harmonised and comparable data series (across countries and through time). The purpose is to calculate the European Union (EUR12/EUR15) aggregates. These changes consist mainly of:

- Item reclassification;
- Production of estimates for missing data based on the data of the other Member States: either by directly using mirror figures, or by using the average structure of Member states which provide relevant information;
- Production of estimates based on previous or subsequent series.
- Corrections to bring as far as possible original data in line with *BPM5*.

Breakdown by partner zones:

On this subject, Member States provided somewhat dissimilar information with respect to both quantity and quality.

The overall rule which was observed in the entire study was to preserve consistency with the Eurostat current flows estimates concerning partners World, Intra EUR15/12, Extra EUR15/12, USA and Japan which were published in the publication "*International trade in services-EU, 1986-1995*, Eurostat 1997".

In addition, certain missing partner zones have been reconstituted by different methods.

- Reconstitution from details provided in the questionnaire for countries making up the missing zones - (this is the most frequent case).
- Reconstitution from available data, either from other Eurostat BOP questionnaires, or from previous series, or still from subsequent series. In this last case, Eurostat generally extrapolates the previous series, or retropolates the subsequent series.

¹ Electronic Data Interchange For Administration, Commerce and Trade

- Reconstitution from data available in other Member States.

- Reconstitution from data available in national publications.

- Reconstitution from data available in international publications: Eurostat (complementary sources such as external trade), *OECD*, *IMF*, *WTO*...

After this stage of harmonisation, correction and estimation checks are carried out again.

The whole set of raw data obtained from the Member States is nevertheless largely sufficient to obtain correct estimates. However certain countries have a restricted breakdown by partner zones (See *III.2.3 Data availability*).

Details of corrections/estimates are provided in a separate booklet "Deviation from the defined methodology for each reporting economy" - Annex to the publications "International trade in services - EU, 1986-1995" and "Geographical breakdown of the current account - EU, 1992-1995".

◆ Step 4: Preparing the reports for data validation:

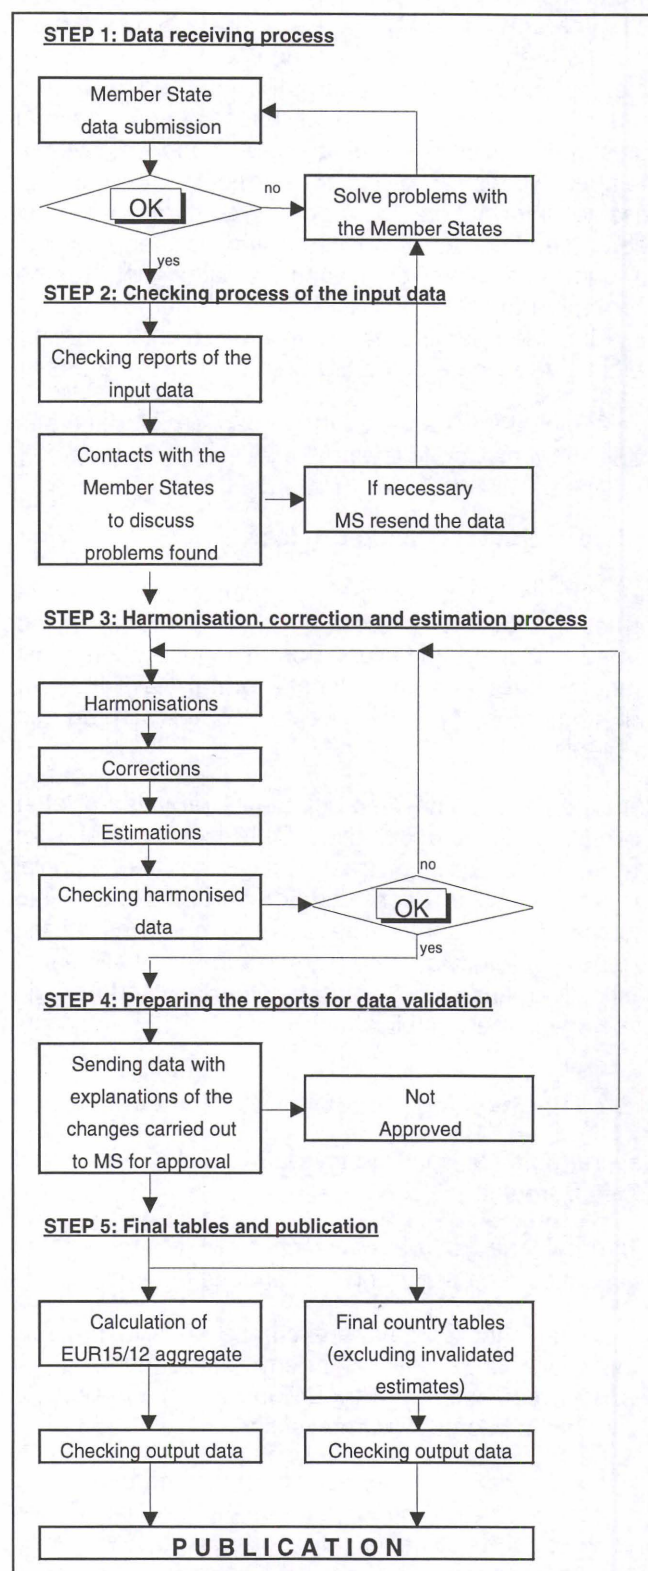

The tables to be published are sent to each Member State for approval. These tables are sent with a report containing a detailed explanation (including examples) of the corrections and estimates carried out. Transparency is thus a constant objective during the entire production process.

Eurostat receives within a set deadline the official approval from the national *BOP* compilers. If there is only a partial approval Eurostat publishes under the country caption only what has been agreed upon by the Member State. Other estimates for the EUR15/EUR12 aggregate are published in order to provide a complete set of EUR15/EUR12 figures.

◆ Step 5: Final tables and publication

After converting the data into *ecus* using the yearly average exchange rates, EUR15/EUR12 aggregates are calculated and tables by country excluding invalidated estimates (step 4) are prepared to be published.

Finally, before publishing the data a further check is performed.

4.2. Calculation of the European Union (EUR15 and EUR12) balance and data reliability

From 1992 to 1995, the estimates for the EUR15 and EUR12 balance of payments correspond to the sum of the fifteen (respectively of the twelve) Member States. Added to the European Union aggregate is the balance of payments of the European Union Institutions. Some data were converted from the *BPM4* to the *BPM5* format using the correspondence table detailed in annex 4.

In order to construct the European Union aggregates, Eurostat used the country tables published under the country headers. In addition to the estimations made at the country tables level, further estimations were required to fill up any missing items.

The tables overleaf depict the estimations which have been carried out in order to calculate the European Union aggregates. Each type of estimation is represented by a number, which details the level of geographical breakdown modified. The method used for the estimation is described in the country methodology under the item represented by ■, in the separate booklet "Deviation from the defined methodology for each reporting economy" - Annex to the publications "International trade in services - EU, 1986-1995" and "Geographical breakdown of the current account - EU, 1992-1995".

In order to analyse the European Union's transactions with the rest of the World, all Intra EU flows must be eliminated and only Extra EU flows examined.

Member States' declared Intra EU credits should be equal to their declared Intra EU debits. However, owing to various problems, amongst which geographical misallocation might be one of the most important, the Intra EU balance is not nil.

Measurement of asymmetry

The Intra EU balance is called the Intra EU asymmetry and is a measure of the reliability of the data. (In the formulae, the superscript represents the reporting entity, the subscript the partner entity).

$$\text{Asymmetry}_{\text{Intra EU}}^{\text{EU}} = \text{Credit}_{\text{Intra EU}}^{\text{EU}} - \text{Debit}_{\text{Intra EU}}^{\text{EU}}$$

When analysing the European Union's balance of trade with the rest of the World, it is preferable to use the total balance that is assumed to be closer to the correct Extra EU balance (in the tables net of EU with Extra EU is considered as not relevant).

For credit and debit flows of the EU with the rest of the World, the Extra EU as a partner should be considered.

The reliability of data for services is satisfactory at an aggregated level. But the greater the degree of detail, the more the effects of incorrect classification come into play and the greater the asymmetry. Detailed data must therefore be treated with caution and magnitudes should be preferred to absolute figures.

III

STATISTICAL TABLES

III. STATISTICAL TABLES

1. DESCRIPTION OF TABLES

Tables of results are organised in sets. The organisation is the following:

Tables 3.1. to 3.5. constitute a first set of comparative tables concerning 1995 for the main items of the current account (*goods, services, income, current transfers, current account*) for EUR15, EUR12, all Member States and the European Union Institutions in relation to 49 partner zones. Flows are presented corresponding to the most complete, recent, harmonised and detailed information available.

Tables 4.1. to 4.3. show a second set of tables for the year 1995 and concern only EUR15. For a detailed list of 14 services items and sub-items, flows are presented in relation to 49 partner zones. The European Union aggregate was calculated on the basis of the data reported to Eurostat by the fifteen Member States according to the questionnaires¹ following *BPM5* requirements.

Tables 4.4. to 4.20. concern only EUR15 for the period 1992 to 1995. For each of the 17 services items and sub-items, flows are presented in relation to the 49 partner zones. The European Union aggregate was calculated as for tables 4.1. to 4.3..

Tables 4.21. to 4.67. concern only EUR15. For the classification adopted and for the period 1992 to 1995, credit, debit and net flows are presented in relation to all partner zones.

Tables 5.1 to 5.51. are equivalent to tables 4.21. to 4.67. but concern EUR12 (period 1992 to 1995).

Tables 6.1. to 20.48. supply a group of separate sets of tables for each of the fifteen reporting economies. For the classification adopted, for all Member States and the European Union Institutions, for the period 1992 to 1995, credit, debit and net flows are presented in relation to the maximum number of partner zones available for each reporting economy.

Tables 21.1 to 21.4. present flows for the USA according to Eurostat's harmonised scheme. The period covered is 1992 to 1995 with the World, Intra EUR12, Extra EUR12 and Japan as partners .

Tables 22.1. to 22.19. presents flows figures for Japan according to Eurostat's harmonised scheme. The period covered is 1992 to 1995 with 19 zones as partners.

N.B.: In the tables, the partner *World* should be considered as the sum of *Intra EU*, *Extra EU* and *World not allocated* (not published).

Due to the rounding up from decimal numbers to whole numbers, there can be a slight difference between the sum of the sub-items and the aggregate item or between the credit figure minus the debit figure and the net.

¹ Balance of payments Vade mecum, March 1996

2. FORMULAE AND ACRONYMS USED IN THE TABLES AND DATA AVAILABILITY

2.1. Formulae

Formulae are indicated in the tables by footnotes. In the formulae, the superscript represents the reporting entity, the subscript the partner entity. The acronym EU may be EUR15 or EUR12.

Net = Credit - Debit

$$\text{Asymmetry}_{\text{Intra EU}}^{\text{EU}} = \text{Credit}_{\text{Intra EU}}^{\text{EU}} - \text{Debit}_{\text{Intra EU}}^{\text{EU}}$$

2.2. Acronyms used

0	Figure between -0.5 Mio ECU and 0.5 Mio ECU
:	Data not available (missing data estimated by Eurostat) or considered non publishable by the Member State.
-	Not relevant or indeterminate: ➤ Net EUR15/12 vis à vis Extra EUR15/12

(1) Net EUR15/12 with Intra EUR15/12 = Asymmetry

(2) Due to Intra EUR15/12 asymmetries, it is preferable to use the net of EUR15/12 with the world that is considered to be closer to the correct Extra EUR15/12 balance

ANNEX 5

BOP ECONOMIC TERRITORY

All Members States do not have the same criterion in registering the small territories and it can lead to asymmetries. To harmonise the data collection, Eurostat asks the Members States to use as *BOP territory* of their partner countries the classification described below. It is suggested that the *BOP* statisticians continue to use the *ISO 3166 coding system*. However the *BOP* codes have a slightly different meaning (since they include some overseas territories).

BOP CODE	COUNTRY	ISO CODE	BOP TERRITORY
A3	BLEU	BE LU	Belgium Luxembourg
DK	DENMARK	DK FO GL	Denmark Faroe Islands Greenland
DE	GERMANY	DE	Germany Excluding Büsingen and Büttenhardter Höfe (customs free zones belonging to the customs territory of Switzerland) Including Jungholz and Mittelberg (parts of the territory of Austria but customs union with Germany)
GR	GREECE	GR	Greece
ES	SPAIN	ES	Spain (including Balearic Islands, Ceuta and Melilla and Canary Islands)
FR	FRANCE	FX MC GF MQ GP RE PF NC WF YT PM	France, metropolitan Principality of Monaco Overseas Departments: French Guiana Martinique Guadeloupe (Grande Terre, Basse Terre, Marie Galante, Les Saintes, Iles de la Petite Terre, Désirade, Saint Barthélemy and Northern St Martin) Réunion Overseas territories: French Polynesia (Marquises, Société, Gambier, Tubai, Tuamotu, Clipperton) New Caledonia and dependencies (Pins, Loyauté, Huon, Belep, Chesterfield) Wallis et Futuna Islands Territorial collectivities: Mayotte Saint Pierre et Miquelon
IE	IRELAND	IE	Ireland
IT	ITALY	IT SM	Italy San Marino
NL	NETHERLANDS	NL	Netherlands (excluding Netherlands Antilles)
AT	AUSTRIA	AT	Austria (excluding Jungholz and Mittelberg)
PT	PORTUGAL	PT	Portugal (including Açores and Madeira)

European Commission

Geographical breakdown of the current account — EU, 1992-95

Luxembourg: Office for Official Publications of the European Communities

1997 — 445 pp. — 21 x 29.7 cm

Theme 2: Economy and finance (violet)

Series D: Studies and research

ISBN 92-828-2127-7

Price (excluding VAT) in Luxembourg: ECU 36

This document presents statistics on the geographical breakdown (in relation to different partner zones) of the current account of the European Union (EU-15 and EU-12), its Member States, the United States and Japan. The period covered is from 1992 to 1995.

To allow comparisons, these figures have been harmonised according to a common classification (approximately 25 items), on the basis of the balances of payments of the abovementioned States. The statistical tables present a more detailed geographical breakdown than that of previous publications. More particularly, for 1994 and 1995, for the EU and its Member States the geographical breakdown of the flows is extended to about 50 countries, geographic zones and economic zones.

All flows are expressed in ecus.

This document includes methodological explanations and a short description of the harmonisation work undertaken. The methodological framework is that of the fifth IMF manual.
